

# Tri-Core® Pillow

Industry's #1 Fiber  
Support Pillow

- ➔ Designed for back and side sleepers
- ➔ High-resiliency fiber springs back when compressed for comfort and durability

## Proper Support

Finding the right pillow is key to getting a comfortable night's rest and to waking feeling refreshed. Our best selling orthopedic pillow, the Tri-Core is ideal for helping to correctly align the spine and support the neck in its natural position for side and back sleepers alike. Our patented design with unique trapezoid center and twin support lobes support the head and neck, making it the highest quality cervical support pillow available.

While sleeping on your back, Tri-Core's center comfortably cradles your head while the lower lobe supports your neck, helping restore the normal curvature of your spine. As you turn to the side, side lobes help support your head and neck in a neutral position, promoting good spinal health.

## Natural Pain Relief

Patients suffering from tension headaches, neck injuries and arthritis may benefit from using the Tri-Core pillow. Maintaining proper sleeping posture can help correct nerve malfunction and promote healing of injuries. The firm support keeps head elevated and can help alleviate blocked airways, a major cause of snoring.

## Quality Materials

The hypoallergenic, high-resiliency fiber of the Tri-Core Pillow provides a superior pillow life. Covered in high quality broadcloth and carefully designed and constructed. Choose the firm support of our Standard Tri-Core Pillow or the Gentle Tri-Core with slightly less fiber and height. Our Mid-Core Pillow is sized for smaller users and greater portability.
